Brytend: Our Mission

User-Friendly Design

Our software prioritizes ease of use with an intuitive interface.

Powerful Features

We offer robust features designed to meet the needs of diverse industries.

Scalability & Flexibility

Our software scales with your business as you grow and adapt.

About Us

We are a software innovator company with a passion for creating amazing software solutions.

We have worked on many projects across various domains and industries.

We have combined the best software solutions into one powerful solution that can handle any task.

We have also made our online software solution flexible and adaptable.

We have tested our software on the stage with real users and scenarios.

CRM Features

Customer Management

Organize and manage all your customer data in one place.

- Businesses / Employees
- Locations and Branches
- Individual contacts

Collaboration

Work together with your team to manage customer interactions.

- Notes
- Reminders
- Tasks & File upload

Custom Fields

Create custom fields to store specific information for each customer. Highly adaptable in every situation

Stock Management

Product Tracking

Manage your inventory efficiently with our robust stock management system. Track product specifications, monitor stock levels, and receive real-time updates on inventory changes.

Online Integration

Seamlessly integrate your online webstore with our stock management system. Maintain accurate inventory data across all channels to avoid overselling and ensure customer satisfaction.

Real-Time Data

Leverage real-time exchange rate integration for accurate pricing and cost calculations. Our system automatically updates prices based on fluctuations in currency rates.

Warehousing Solutions

Inventory Tracking

Register and track each item with a unique serial number.

Capture detailed information about each item.

Goods Flow Management

Set up a flexible system for registering goods.

Track incoming and outgoing items efficiently.

Data Synchronization

Centralize information on a decentralized database platform.

Use our daisy-chain capability for seamless data transfer.

Tasks and Projects Management

1 Task Assignment

Assign tasks to team members and track their progress.

3 Recurring Tasks

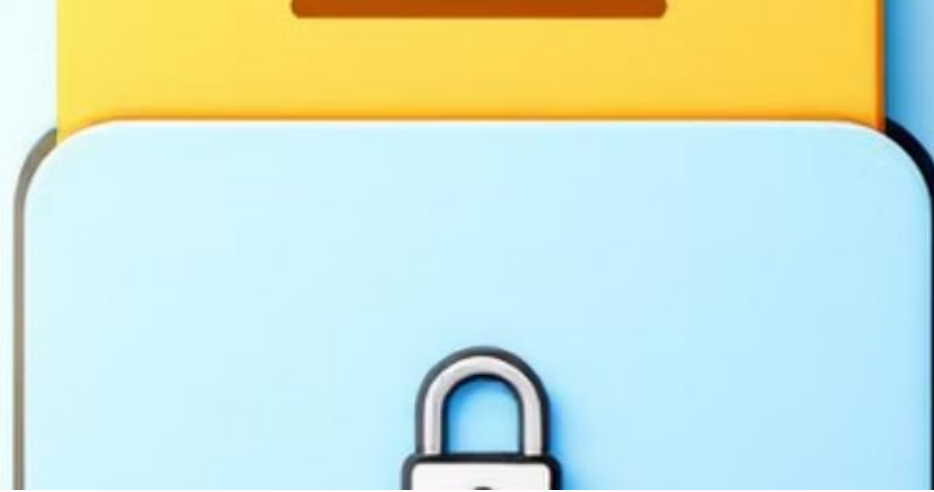

Automate tasks that need to be done regularly.

2 Deadline Tracking

Set due dates for tasks and receive reminders.

4 Cost Tracking

Register and filter project-based costs.

File Repository

Secure Sharing

Store and share files from a central location. Control who can access and download files.

Restricted Access

Apply passwords or other restrictions before downloading sensitive files.

Content Inspections

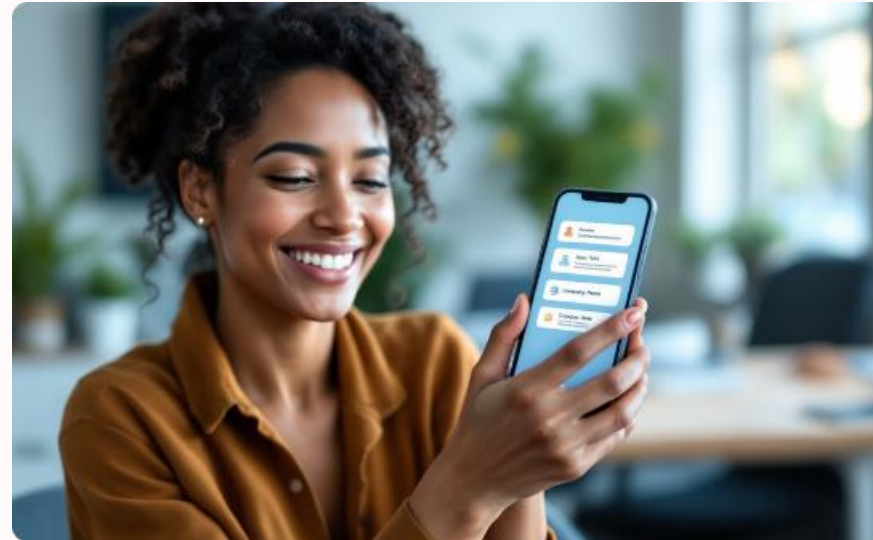

Set notifications to review files before they're shared.

Intranet Features

Internal Communication

Improve communication across teams and departments with a shared space for announcements and discussions.

Contact Information

Access contact information quickly and easily through a central directory.

Sharing Documents and Files

Share and collaborate on documents and files, ensuring all employees have access to the most up-to-date information.

Stage 1

Stage 2

Survey Creation Process

1

Build Forms

Create custom web forms for various purposes – gathering data for customer satisfaction, warranty, and support. Build forms from scratch or use pre-designed templates.

2

Actionable Insights

Generate tasks and actions directly from survey submissions. Identify areas needing improvement based on feedback, streamline workflows, and boost customer engagement.

3

Comprehensive Reporting

Analyze survey results and benchmark performance. Gain valuable insights into customer preferences and satisfaction, generating comprehensive reports to identify trends and make data-driven decisions.

Service Management

1 Device Registration

Quickly record details for every customer device for organized record-keeping.

3 Certificate Generation

Produce customized certificates for warranties, service completion, or device calibration.

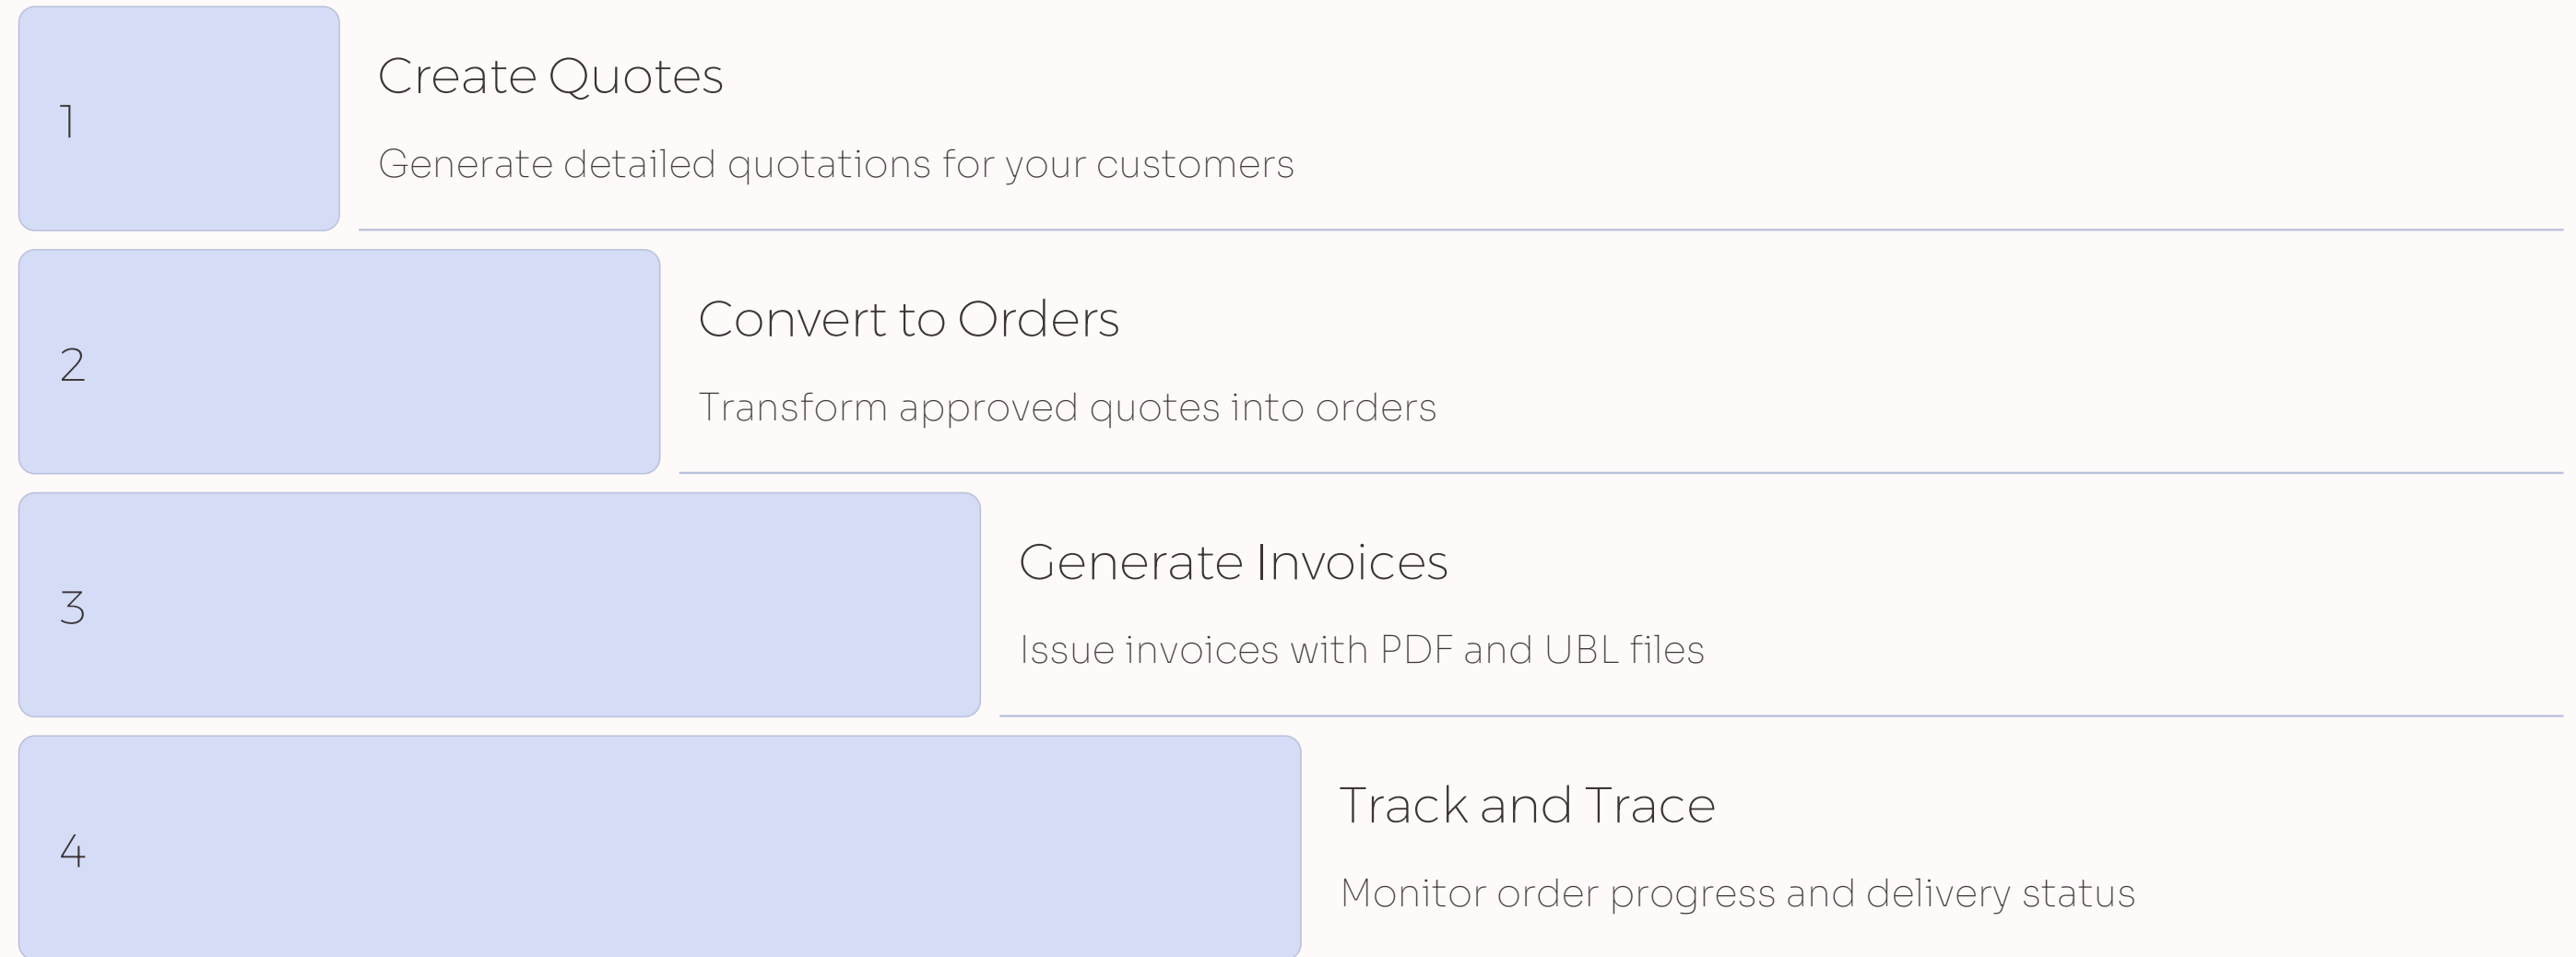

2 Service Recall

Initiate service reminders for product updates, repairs, or safety notices.

4 Database Viewer

Access a comprehensive database to track and manage all service-related information.

Quotations to Invoices Workflow

Brytend Software streamlines the entire quotation-to-invoice process, from creation to delivery. Our comprehensive system allows you to manage all types of orders, track serial numbers for accurate product selection, and seamlessly convert quotes into orders and invoices.

Rental and Asset Loan Features

Streamlined Rental Process

Create rental orders quickly and easily. Our system supports cross-selling and upselling to maximize revenue.

Paperless Asset Loans

Our asset loan module eliminates the need for paperwork. Use digital signatures to ensure a smooth and efficient process.

Automated Device Tracking

Our system helps you keep track of your assets. Create automatic reminders for returns and ensure you receive all your equipment back.

Import / Export Capabilities

Data Exchange

Our **import/export** module enables seamless data exchange with third-party software, like accounting systems. **API | CSV | XML**

Integrate with industry-leading solutions for streamlined data management. **Grafana | MS Power BI**

Information Syncing

Share data with external systems, including contact details, business records, stock levels, order and sales information.

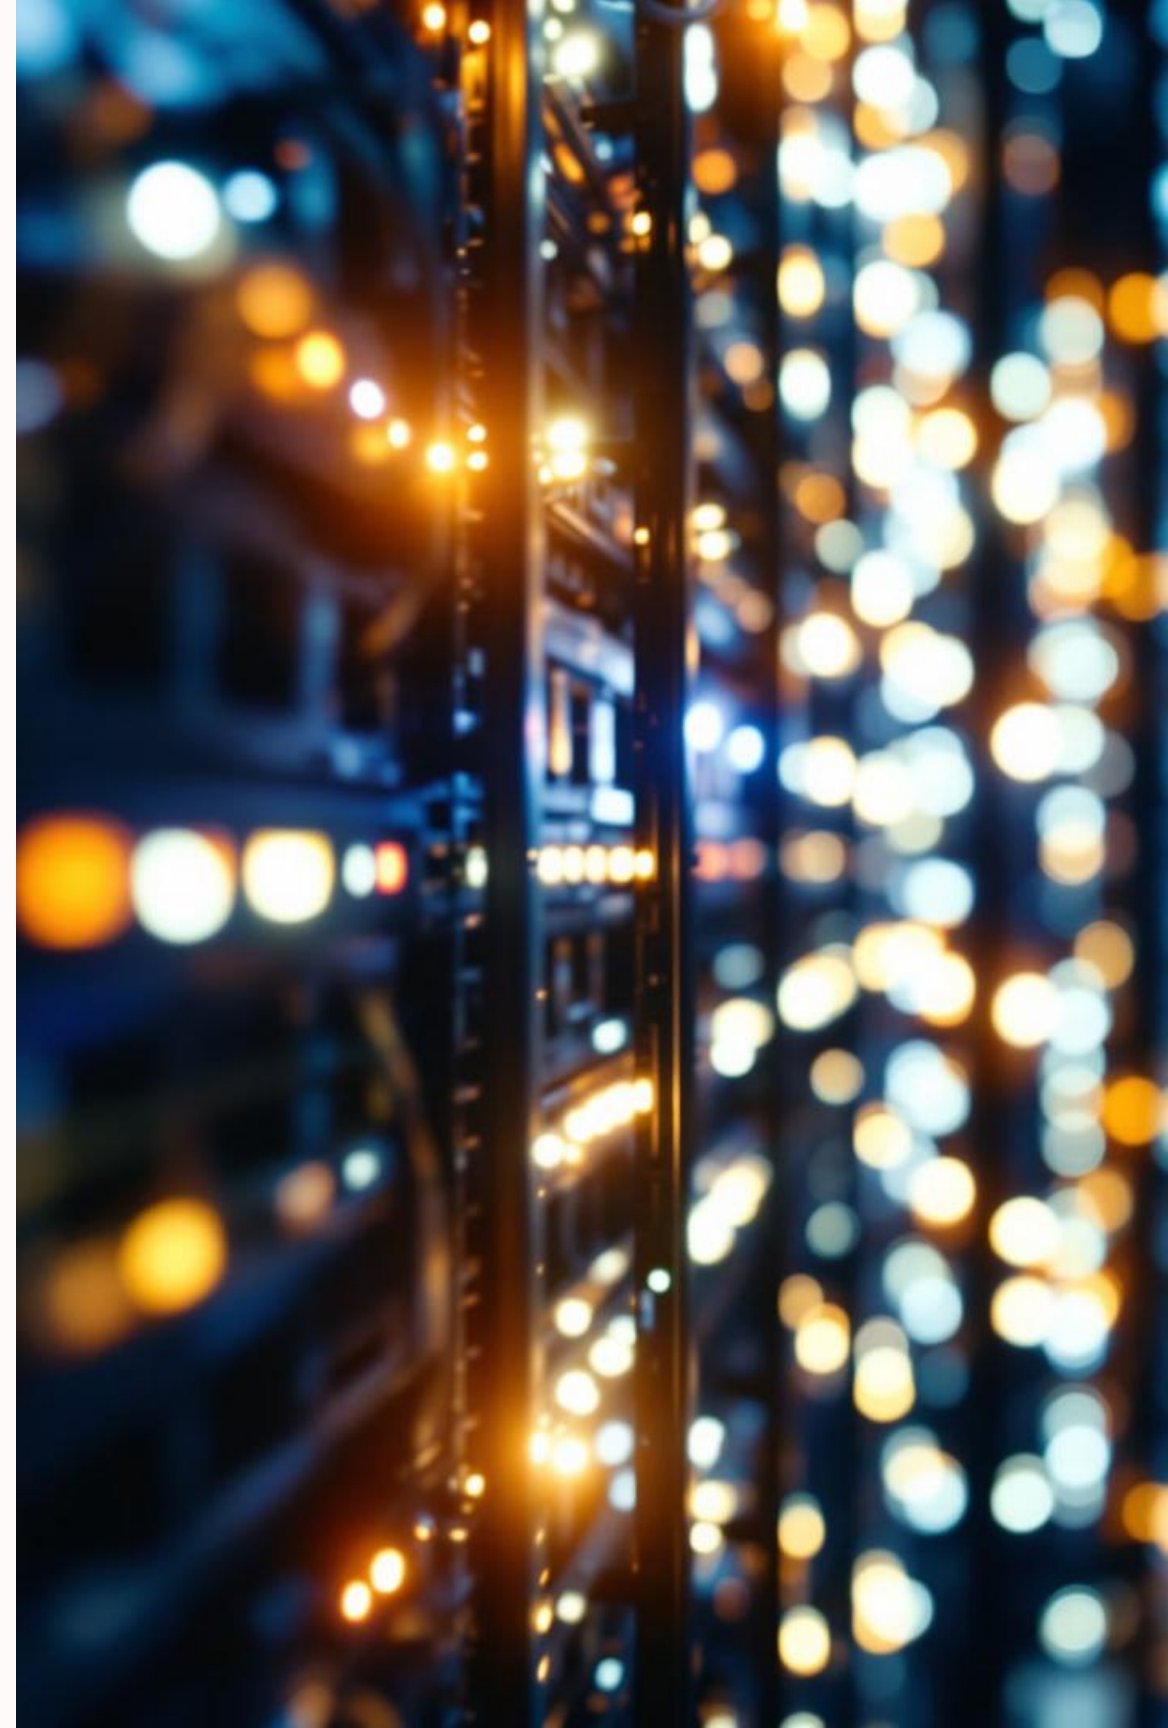

Improve data accuracy, reduce manual input, and enhance business efficiency.

System Infrastructure

We offer reliable hosting in 31 countries across 4 continents.

All of our data centers use high-end equipment and are located in Tier 3+ facilities.

Our software update servers and twice-daily backups ensure a 6-month retention period.
